Figure 4.11: Screenshots of Remark	7
Figure 4.12: Screenshots of Grade	7
Figure 4.13: Screenshots of Rank	7

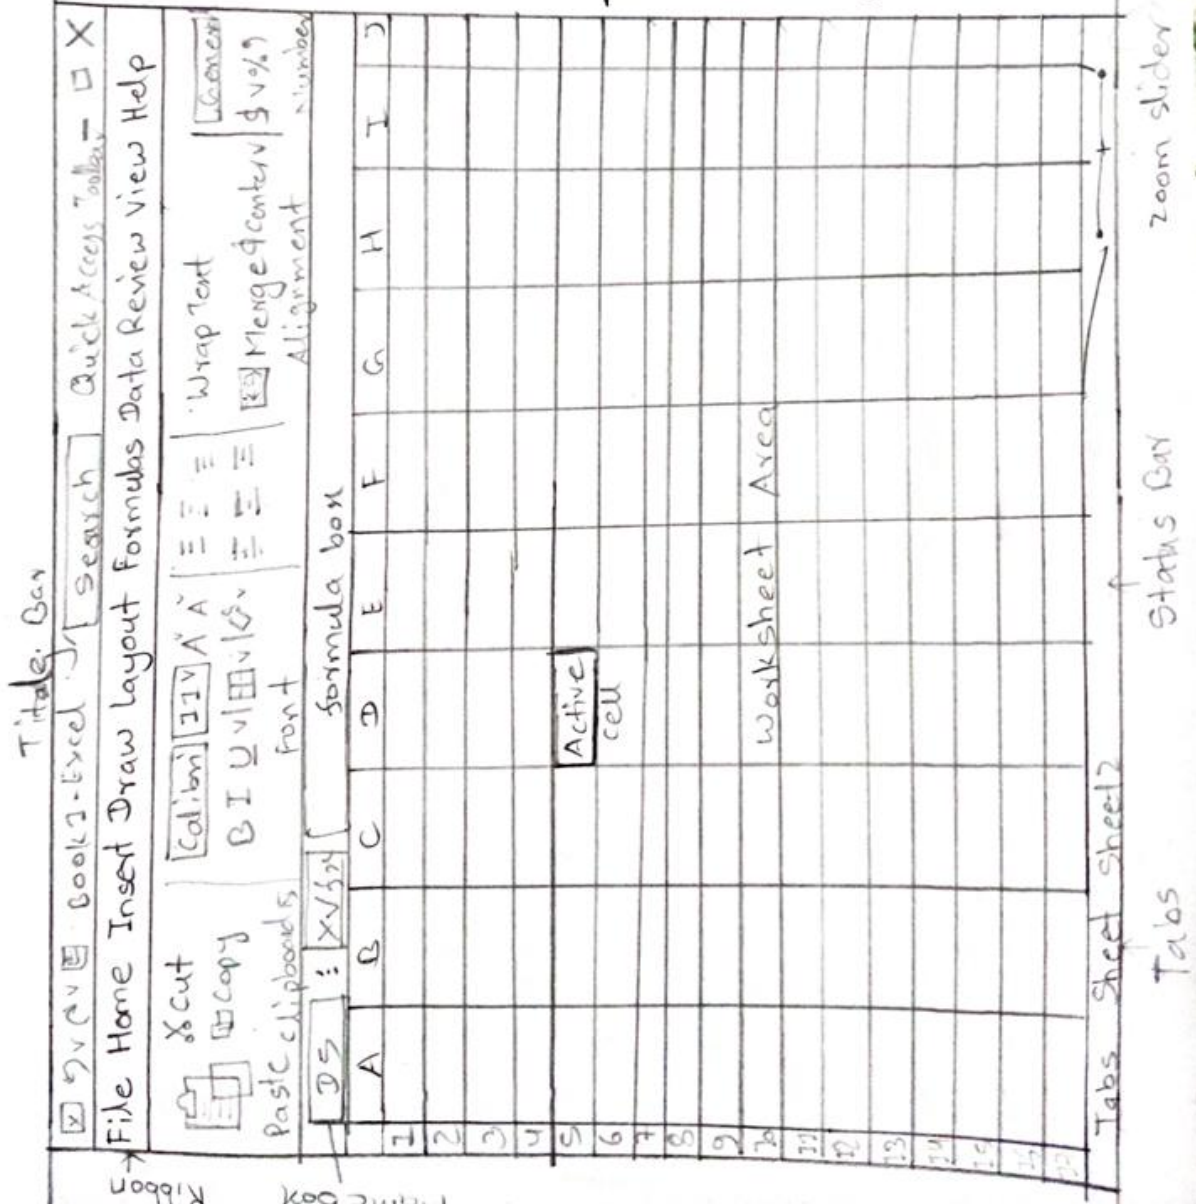

Theory

Theory

1. Define a Cell in Microsoft Excel.

Ans:- A cell is the box formed by the intersection of a row and a column in an Excel worksheet. It is used to enter and store data such as text, numbers or formulas. Example: A1, B5, C10, E3

2. Draw and label the blueprint of MS Excel.

3. Define Relative Cell Reference with example.

Ans:- A Relative Cell Reference is a type of cell reference in Microsoft Excel that changes automatically when a formula is copied or moved to another cell. Example:- If cell C3 contains $=A3+B3$ when copied this formula to C5, it automatically changes to $=A5+B5$

4. Define Mixed Cell Reference with one example.

Ans:- A Mixed Cell Reference is a type of cell reference in MS Excel that locks either the row or the column while allowing the other to change.

Example:- $\$A1$ $\rightarrow$ Column A is fixed, row changes.

$A\$1$ $\rightarrow$ Row 1 is fixed, column changes.

5. Define Absolute Cell Reference with one example.

Ans:- Absolute cell Reference is defined as the type of cell reference that keeps both the row and column fixed when a formula is copied.

Example:- $\$A\1

If copied anywhere, it always refers to cell A1.

6. Define VLOOKUP

Ans:- VLOOKUP is an Excel function that searches for a value in the first column of a table and returns the corresponding value from another column in the same row.

Example:

Roll No	Name
1	Ram
2	Sita

Formula $=VLOOKUP(2, A2:B3, 2, 0)$ Result: Sita

7. Write the syntax of VLOOKUP and explain each argument with an example.

Ans:- Syntax:

=VLOOKUP(lookup_value, table_array, col_index_num, [range_lookup])

Arguments:

1. lookup_value

The value you want to search is called lookup value

Example :- Roll Number 1.

2. table_array

The table where Excel searches.

Example: A2:D11

3. col_index_num

The column number from which the result is returned.

Example

1 = Roll no

2 = Name

3 = Section

4 = Total

4. range_lookup

FALSE = Exact match

TRUE = Approximate match

Example: Suppose the table is in A2:D11

Roll No	Name	Section	Total
1	Ram	A	450
2	Sita	B	470
3	Hari	A	430

Formula: =VLOOKUP(2, A2:D11, 2, FALSE) Result = Sita

Lab Activity Reflections

Lab Activity Reflections

During the MS excel lab activity, I learned how powerful spreadsheets can be for organizing, analyzing and presenting data. I practiced using basic formulas such as SUM, PERCENTAGE etc. I also learned different functions and tools to manage data more effectively, especially the VLOOKUP function. This function helped me search for specific value in a table and return related information, which made handling large datasets much easier. Overall, the lab activity improved my confidence in using Excel for academic tasks and gave me a better understanding of how it can be applied in real-world situations.

Conclusion

Conclusion

MS Excel assignment have given me a clear understanding of both theoretical and practical aspects of Excel software. I learned the basic structure of excel and different functions, especially VLOOKUP function, I gained confidence in managing and analyzing data more effectively.
